Up and above their base salaries are extensive benefits and bonuses, which may include stock or stock options. Due to the intense competition and the massive revenue a new game can generate, the median value of bonuses and benefits is \$31.1% but some game developers receive over 100% of base not including their stock or stock options. This also does not include hiring bonuses or one-time special bonuses for devising a new process or inventing a new piece of software or game that increases traffic on the site and revenue etc.
